

Booking Platform - Setup Guide

Installation Steps

```
npm install
```

Environment Variables

PORT – Application port
DATABASE_HOST – PostgreSQL host
DATABASE_PORT – PostgreSQL port
DATABASE_USER – PostgreSQL user
DATABASE_PASSWORD – PostgreSQL password
DATABASE_NAME – PostgreSQL database name
JWT_SECRET – Access token secret
JWT_EXPIRES_IN – Access token lifetime
JWT_REFRESH_SECRET – Refresh token secret
JWT_REFRESH_EXPIRES_IN – Refresh token lifetime

Database Setup

Local PostgreSQL

Create a database (example: booking_platform).
Set .env values to your local instance.
Run migrations.

Docker (optional)

```
docker run --name booking-postgres -e POSTGRES_PASSWORD=postgres -e  
POSTGRES_DB=booking_platform -p 5432:5432 -d postgres:16
```

Running the Application

```
# development  
npm run start:dev
```

```
# production build  
npm run build  
npm run start:prod
```

Running Migrations

```
# create migration file from entity changes  
npm run migration:generate
```

```
# run pending migrations  
npm run migration:run
```

```
# rollback last migration  
npm run migration:revert
```

API Documentation

Swagger UI: <http://localhost:3000/api/docs>
Postman collection: postman/Booking-Platform-API.postman_collection.json
Postman environment: postman/Booking-Platform-API.postman_environment.json

Testing

unit tests
npm run test

e2e tests
npm run test:e2e

coverage
npm run test:cov
